

Scaling Formula

$$\text{Math.floor}(\text{Math.random()} * (\text{max} - \text{min} + 1)) + \text{min}$$

① $\text{Math.random}()$ → generate random number between 0 and 1 ^{suppose} = 0.57

② min = minimum length of range = 10
 max = maximum length of range = 50
 $(\text{max} - \text{min} + 1)$

$$50 - 10 + 1 = 41$$

③ Multiply $\text{Math.random}()$ with 41.
 $= 0.57 \times 41 = 23.37$

④ $\text{Math.floor}(23.37)$ gives 23

⑤ $\text{Math.floor}(\text{Math.random()} * (\text{max} - \text{min} + 1)) + \text{min}$
 $= 23 + 10$

So finally is = 33
